

RUDRA DIMPALKUMAR PARMAR

FULL-STACK WEB DEVELOPER — NEXT.JS · REACT · TYPESCRIPT

Bhavnagar, Gujarat, India · rudradparmar06@gmail.com · +91 97265 84486 · linkedin.com/in/rudradparmar
· github.com/rudradparmar

SUMMARY

Full-stack web developer building production applications in Next.js, React, and TypeScript, with paid client work delivered end to end and live apps deployed on Vercel. Experienced across Node.js and Express REST APIs, real-time WebSocket systems, MongoDB and Firebase, and Ethereum smart contract integration.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Solidity, SQL, HTML5, CSS3

Frontend: Next.js (App Router), React.js, Tailwind CSS, Flutter, Responsive Design, UI/UX Design

Backend: Node.js, Express.js, FastAPI, REST API Design, WebSockets, Authentication

Data & Cloud: MongoDB, MySQL, Supabase (PostgreSQL), Firebase, Vercel

Web3 & Tools: Solidity, Web3.js, MetaMask / EIP-1193, Ethereum (Sepolia); Git, GitHub Actions (CI/CD), Third-Party API Integration

EXPERIENCE

Freelance Full-Stack Web Developer — Independent, Bhavnagar, India 2026 – Present

- Built **lagloria.in** for ByLumeo Studios — the home page and online ordering and booking experience for a pizzeria — as a full-stack developer and one of the project's architects inside a delivery team.
- Designed and delivered the portfolio website for **Informal Studios**, a video editing agency, owning the engagement end to end: requirements, UI design, implementation, client review cycles, and deployment.
- Translated client requirements into technical specifications, shipped responsive cross-device interfaces with third-party API and authentication integration, and handled scope, timelines, and progress communication directly with stakeholders.

PROJECTS

EarsToPeers — Entertainment Discovery Platform | Next.js, TypeScript, Tailwind CSS, TMDB API

earstopeers.vercel.app · github.com/rudradparmar/earstopeers

- Built a Next.js App Router app aggregating movies, TV, anime, games, books, and tech news into one searchable catalog with category routing and user authentication.
- Integrated TMDB and news APIs with server-side fetching to avoid client-side waterfalls; typed the data layer and shipped continuous deployment from GitHub to Vercel.

Recalling — Video Call & Real-Time Chat Platform | React.js, Node.js, Express, MongoDB, WebSockets

github.com/rudradparmar/Recalling-videocall-chat

- Built a full-stack real-time platform supporting low-latency video calls and instant messaging across modular frontend and backend layers.
- Engineered event-driven modules for async state sync and session lifecycle across concurrent clients; automated checks and deploys with GitHub Actions.

Decentralized Lottery DApp | Solidity, Web3.js, Ethereum Sepolia, React.js

- Built a DApp where users enter a lottery by sending ETH via MetaMask, with a Solidity contract on the Sepolia testnet holding funds and selecting a verifiable on-chain winner.
- Used Web3.js to read live on-chain state and send payable transactions from the browser, with EIP-1193 account listeners and role-gated UI limiting manager actions.

EDUCATION

Bachelor of Engineering, Information Technology — Government Engineering College, Bhavnagar

Expected 2027

ADDITIONAL

Other Projects: Developer Events (Next.js, TypeScript); LeaveFlow — Leave Management System (MERN); Anonymous Blog Platform

Languages: English, Hindi, Gujarati (Native)
